

Automation

Our automation services combine services for developing new controls, upgrading of existing controls for production lines or individual machines for the wire and cable production.

Consulting

We offer support selecting the best machines and equipment for your project as well as engineering and manufacturing support for new or difficult products.

Technical Equipment

The technical equipment includes the supply of machines with optimized performance composed by machines according to ACOTEQ's own design or integration of machines of different brands.

Service

We offer sourcing of mechanical and electrical spare parts as well as troubleshooting with your machinery on short notice.

We have concentrated a group of specialists and experts with an enormous expert knowledge and practical experience in different fields of the wire and cable industry. By founding the company ACOTEQ GmbH we have merged them and made these specialists and their knowledge available for our customers. The purpose of the company is to become a good, reliable and complete provider for expert knowledge, machines, equipment and services for different industries but specialized for clients in the wire and cable industry. Our location is the HIMO Innovation Center in Monschau (near Aachen, approx. 1,5 hour drive from Düsseldorf) located in North Rhine Westphalia, Germany.

The name ACOTEQ stands for **A**utomation, **C**onsulting and **T**echnical **E**quipment.

Our services

Our upgrading services include analysis of the present situation of the mechanical machine and electrical
